

>**re·ject items**< checks or drafts that cannot be processed when presented for payment. There are various causes of reject items: an unreadable MICR line on a damaged check, misencoding of the dollar amount or account number or an incorrect routing and transit number. Reject items require special handling.

>MirrorImage **re·pair**< allows you to correct items on-screen, without handling paper items repeatedly. Check21 further streamlines this operation by eliminating the need for the amount encoding at the institution of first deposit. The **re·pair** module is fully integrated with your core banking application and the Federal Reserves' FedWire service.

**re·pair** takes advantage of cutting-edge technology like CAR/LAR to automate the balancing process and limit the need for manual data entry.

**re·pair** ensures that all batches are balanced before the posting file is generated in the Image POD module. It streamlines the balancing process by allowing for the creation of virtual items, such as deposit correction tickets.

**re·pair** includes advanced features, such as intelligent balancing and account validation.

# MIRRORIMAGE SUITE OF MODULES:

## **MIRRORIMAGE cap•ture**

branch capture  
FED capture  
Microfilm Replacement

## **MIRRORIMAGE re•pair**

balance batches/transactions  
image read & key  
perform CAR/LAR  
power encode

## **MIRRORIMAGE im•age P0D**

create posting file  
generate image cash letter  
print substitute checks

## **MIRRORIMAGE re•search**

research items and account holder information  
view and reproduce statements on demand  
post notes on images  
return item processing

## **MIRRORIMAGE ar•chive /dis•tri•bu•tion**

archive to most media (CD-R, DVD, Tape, NAS, etc.)  
distribute images and statements on CD-R/DVD

## **MIRRORIMAGE state•ment**

print image statements

## **MIRRORIMAGE doc•u•ment im•ag•ing**

image loan or HR files  
retrieve by multiple indices

## **MIRRORIMAGE c•o•l•d•**

archive reports for easy access  
full text search capable
